Graymail management

Classification of low-priority e-mails & Safe unsubscribe in 1 click
(Advertisements / Newsletters / Social Network Notifications)

IS GRAYMAIL INVADING YOUR INBOX?

Even after going through an effective antispam, **51%** of the remaining e-mails in your inbox still consist of graymail. These refer to low-priority messages that take up an increasing amount of space in mailboxes, such as commercial e-mails, newsletters or social network notifications. Regardless of whether they are spam or graymail, 82% of users feel that they receive too many low-priority e-mails in their mailboxes.

HOW DO I MANAGE INCOMING TRAFFIC?

In the corporate world, the majority of important e-mails are person-to-person communications (clients, colleagues or service providers). However, such e-mails represent less than half of e-mails received and processing them becomes difficult. The aim of Graymail Management is to file these low-priority e-mails into separate folders that the user can check at any moment.

Installation: when you create your account, Vade Secure will automatically detect whether you are running Office365 or GoogleApps in order to suggest the most optimized configuration. Your distributor will finalize the settings and guide you through the use of the administration console.

MANAGING SUBSCRIPTIONS: THE KEY TO INBOX ZERO

Vade Secure has developed the safe multiple unsubscribe feature. The user unsubscribes from selected e-mails in 1 click. By extracting the unsubscribe URLs detected in e-mails, Vade Secure plays out the scenario on your behalf in total security until the unsubscribe is confirmed. The entire process lasts only 1.4s and has an 84% success rate.

VADE SECURE, THE E-MAIL SPECIALIST

Expert in security against online attacks (phishing, viruses, spam, etc), Vade Secure protects the largest e-mail service providers and boasts more than 300 partners worldwide.
